St. Louis Park, MN 55416

RE: Reilly Tar Superfund Site, Focused Feasibility Study, Well W48

Dear Mr. Meyer, Mr. Reilly and Mr. Gregg:

The Minnesota Pollution Control Agency (MPCA) received the Well 48 Focused Feasibility Study (FFS) on February 16, 2000. The FFS addressed the gradient control system modification, which resulted from the termination of pumping at W48, the Methodist Hospital Well.

This is to notify you that in accordance with Section G.2 of the Consent Decree the MPCA and U.S. Environmental Protection Agency are extending the response date by an additional 30 days. A response to the FFS will be provided by April 14, 2000.

To complete our review of the FFS, we are requesting the following information:

- Please submit records of the pumping rate and monthly pumping volumes for SLP6 over the past 10 years.
- To evaluate the feasibility of the discharge to surface water option we are requesting that you make an initial contact with the Department of Natural Resource and Minnehaha Creek Watershed District. This contact will serve to get an initial understanding of whether the parties would be receptive to allowing discharge to the creek. A written summary of their response is requested by the Agencies.
- Please provide a more detailed cost breakdown for the sewer access charge (\$6,306.570), and GAC unit and Building (\$1,500.000 to \$2,000.000) in each Alternative.

This information is requested to be submitted to the Agencies within 15 days of the date of this letter.

Mr. Charles Meyer, Mr. Thomas Reilly, and Mr. Gregg
